System for Stock Trend Analysis

Project Synopsis

Python and external financial APIs were used in the construction of this stock trend analysis system, which was created to comprehend how actual stock analysis tools operate. The project's main objectives are to retrieve stock data, examine price patterns, and produce basic buy/sell insights. In order to make the logic easy to comprehend and appropriate for academic settings, I made an effort to keep it straightforward.

The System's Features

About

A Python-based Stock Trend Analysis system that fetches real-time data from Twelve Data API, analyzes trends, calculates 10-day moving averages, provides buy/sell suggestions, and visualizes monthly trends with color-coded graphs. Built with Python, Pandas, and Matplotlib for learning purposes.
